PROFESSIONAL SUMMARY

Aspiring AI Engineer with hands-on experience in Python, Data Analysis, Machine Learning, and NLP, as well as full-stack development using FastAPI, Streamlit, React, SQL, PostgreSQL, and Supabase. Built and deployed 3+ end-to-end AI/ML projects achieving up to 90%+ model accuracy, with practical exposure to data preprocessing, model training, and web-based deployment.

EXPERIENCE & TRAINING

AI & Data Science Intern

Jun 2026 – Present

Saylani Mass IT Training (SMIT)

- Gaining practical experience through real-world AI and Machine Learning projects and industry-focused tasks.
- Applying Data Science concepts to build and deploy NLP and automation-driven AI applications using Python.

AI & Data Science Apprenticeship

Apr 2025 – May 2026 | 13 Months

Saylani Mass IT Training (SMIT)

- Completed a 1-year intensive AI & Data Science training program covering Python, Data Analysis, Machine Learning, and NLP across 100+ hours of practical assignments.
- Built and deployed 3 ML-based applications using Python libraries, Streamlit, and FastAPI, improving model accuracy by up to 15% through feature engineering and tuning.

KEY PROJECTS

SIT Interviewer - AI Interview Platform

Technologies: React, FastAPI, PostgreSQL, Groq, Whisper, CodeMirror, Docker

- Built an end-to-end AI interview platform with structured sessions, candidate management, and an admin analytics dashboard.
- Integrated a live coding sandbox, camera and microphone capture, and Whisper transcription for complete interview recording.
- Implemented Groq-powered candidate scoring and comparison with exportable results to streamline hiring decisions.

Qistly - Installment Shopping Platform

Technologies: React, TypeScript, Supabase, PostgreSQL, Capacitor

- Built a shop-now-pay-later platform with flexible monthly plans, secure checkout, delivery tracking, and clear payment details.
- Delivered a single React application for web and Android using Capacitor, backed by Supabase and PostgreSQL.
- Added biometric login, push notifications, and downloadable PDF/Excel statements for a secure user experience.

Prompt Response Database Query System

Technologies: Python, FastAPI, Streamlit, MongoDB (PyMongo), Groq LLM API (Llama 3.3), Google Gemini API, BeautifulSoup, Pandas, Plotly

- Built a natural-language query engine that converts plain-English questions into MongoDB filters and returns live results as tables, KPI cards, and charts.
- Integrated the Groq LLM API (Llama 3.3) with automatic key rotation and rule-based fallback parsing so queries resolve correctly even when a phrase is misspelled or ambiguous.
- Implemented a live web-scraping layer (Requests + BeautifulSoup) to pull course, campus, and admissions data when it isn't already in the database.

TECHNICAL SKILLS

Programming & Databases: Python, SQL, PostgreSQL, MongoDB, Supabase

Data Analysis: Pandas, NumPy, Data Cleaning, Data Visualization

Machine Learning & NLP: Scikit-learn, Model Training, Model Evaluation, NLTK, TF-IDF, Text Preprocessing

Web & Deployment: FastAPI, Streamlit, React, REST API

Tools: Jupyter Notebook, VS Code, Git, GitHub

EDUCATION

Intermediate – Computer Science

Ongoing

Govt. Inter Boys College, Landhi-4
